

## Funding for \$27.7 Million Central WTP

The Central Water Treatment Plant to remove PFAS from city drinking water is the first of three plants that will be built in Hastings. The plant, as well as a raw watermain project to connect Well No. 7 to the plant, will cost \$27.7 million. The project will be funded through a combination of 3M Settlement funds, grants and water fees. Construction on the plant and watermain project will begin this summer. The chart will change if additional funding is secured.
